

Unrivalled Nutrient Partitioning Agent\*

# MATADOR™

Unrivalled nutrient partitioning agent drives carbohydrates intramuscular, promotes extreme muscle fullness and helps inhibit fat cell storage.

**Matador** is the ultimate glucose disposal agent. It amplifies the anabolic effects of the master hormone insulin, driving nutrients forcefully towards the muscles for extreme growth and away from unwanted fat storage.

The result is extreme muscle fullness, absurd pumps, roadmap vascularity and the ability to control high carbohydrate diets in the manner you want. Users of **Matador** can expect to experience surreal, blood engorging muscle pumps during their workouts like never before.

**Matador** is also the perfect body composition agent: its enhanced nutrient uptake to the muscles make it perfect for minimizing fat gain during bulking phases, and also excellent for carbohydrate sensitive individuals during fat loss. Its nutrient partitioning effects are profoundly visible from the first week of use.
